THERAPEUTIC CLAIM

Treatment of human papillomavirus (HPV) infection and HPV-induced pre-malignancies

PRODUCT DESCRIPTION

DNA (synthetic plasmid vector pGX3001 human papillomavirus 16 gene E6/gene E7cDNA-specifying)

A DNA plasmid encoding strategically modified consensus genes for human papilloma virus type 16 (HPV-16) E6 and E7 proteins whose expression is driven by the human cytomegalovirus (hCMV) promoter with the bovine growth hormone (bGH) 3' end gene and bGH gene polyA signal.
